Rdroolsjars

External Jars Required for Package 'Rdrools'

Description

The 'Rdroolsjars' package collects all the external jars required for the 'Rdrools' package. These external jars are quite large in size (10MB) but have a very slow release cycle. By separating the Java and R development, the storage footprint on CRAN is reduced. By using rJava, the Java layer communicates with the R layer and provides the functionality of using Drools in R.

Details

Package: Rdroolsjars
Type: Package
